Cisco

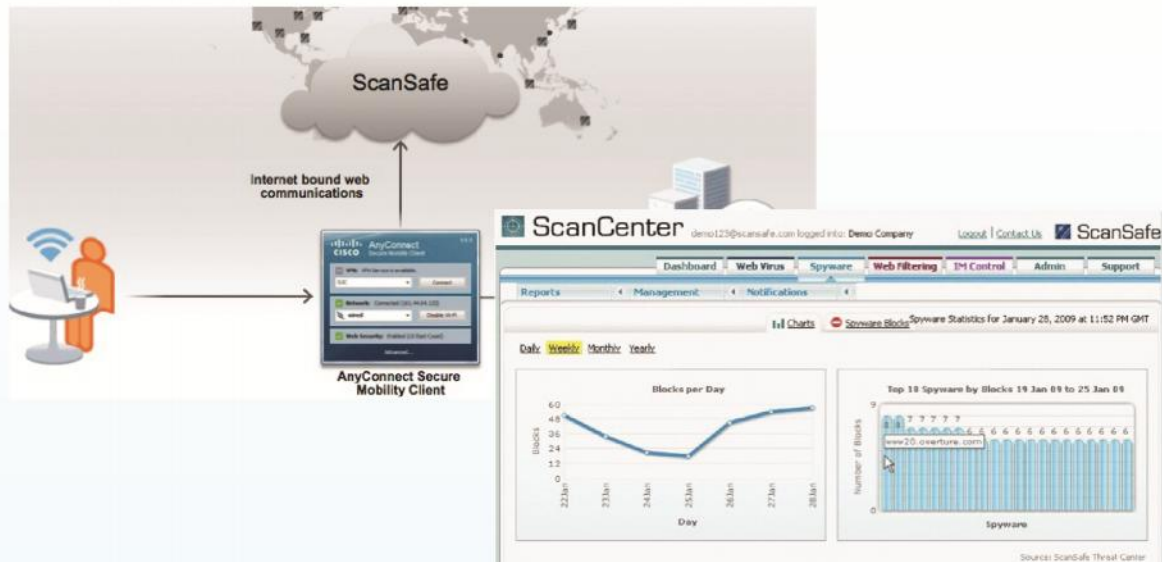

Web Base Security

Content security has never been more challenging in an era where the theft or compromise of corporate data is often the primary incentive for an attack. According to the 2014 Annual Security Report, it found that 100 percent of business networks they analyzed had traffic going to websites that host malware. They also determined through their observation of this activity that when these networks had been penetrated, it was likely that they had been compromised for some time and that the core infiltration had not been detected.

The complex and continually evolving threat landscape makes discovery more relevant than defense as a modern approach to content security. Today's enterprises must focus on content inspection, behavioral anomaly detection, and advanced forensics to gain visibility into threats that are already present in their networks—the "after" phase of an attack.

With over years experience & expertise, Compnet provides a Web Base Security Solutions designed with optimal features and benefits to address the business problem, so the partners may focus to improve their business performance.

Benefit :

- **Granular web use policies:**
Set and enforce across the entire environment for applications, websites and specific web page content.
- **Easy to integrate:**
With flexible network integration options, you can connect Cisco Cloud Web Security (CWS) to your existing infrastructure.
- **Real-time threat intelligence:**
Analysis engines deliver industry-leading antimalware and zero-day threat protection from web-based attacks. Our advanced global threat telemetry network continuously updates Cisco CWS to protect against the latest threats.
- **Centralized management and reporting:**
Increased visibility into web usage and threat information

Features :

- **Defend Against Web-Based Threats**
Get near-real-time web protection, plus granular application visibility and control. CWS offers:
 - Zero-day defense through heuristics engines, signatures, and more in a single cloud-delivered service
 - Analysis of more than 100 TB of security intelligence and 13 billion web requests daily to detect and mitigate threats
 - Granular visibility and control of more than 150,000 applications and micro-applications

- **Defeat Advanced Malware**

Get advanced malware protection with detection and blocking, continuous analysis, and retrospective alerting. CWS provides:

- Advanced security for advanced threats to defeat known and unknown threats
- Protection across the attack continuum—before, during, and after an attack
- Superior visibility and control to see more detail and set granular policies

- **Reduce Costs**

Move to an operating expenses (OpEx) model that lowers complexity for IT, while getting more out of your existing Cisco investment:

- Reduce costs by 30 to 40 percent, compared with on-premises products, with best-in-class malware defense
- Get built-in connector capability for Cisco web security appliances, firewalls, routers, and secure mobility clients
- Lower OpEx; let Cisco manage the backend infrastructure, with instant access to threat and application intelligence

- **Scale Your Solution with High Availability**

Don't worry about adding another box for your web security challenges. Support a distributed enterprise across headquarters, branch offices, and roaming devices with unified policy enforcement, management, and reporting:

- Achieve 99.999 percent uptime
- Right-size your web security investment with per-user subscriptions that scale as your business grows

- **Connect to the Cloud with Flexibility**

Easily authenticate and redirect traffic to the Cisco Security Cloud with flexible network connectors. Cisco Security Cloud delivers a simple web security solution that does not require any additional hardware. Simplify deployment on existing Cisco infrastructure. Customers get:

- Cisco Integrated Services Router Generation 2 (ISR G2) with CWS Connector – Save bandwidth, money, and resources by redirecting traffic from branch offices directly to the cloud.
- Cisco ASA Firewall with CWS Connector – Our firewall integrates with Cisco ASA Software Release 9.0 to provide security at firewall performance without adding data center or network complexity.
- Cisco Web Security Appliance with CWS Connector – Take full advantage of content processing in the cloud with centralized management and policy enforcement.
- Cisco AnyConnect Secure Mobility Client – Safeguard web-based transactions on roaming mobile devices to enforce distributed security policy anywhere your users go.
- Advance Malware Protection – Get continuous visibility and control to defeat malware across the extended network and the full attack continuum—before, during, and after an attack.
