

Compnet Cloud Managed Solutions

Cisco meraki

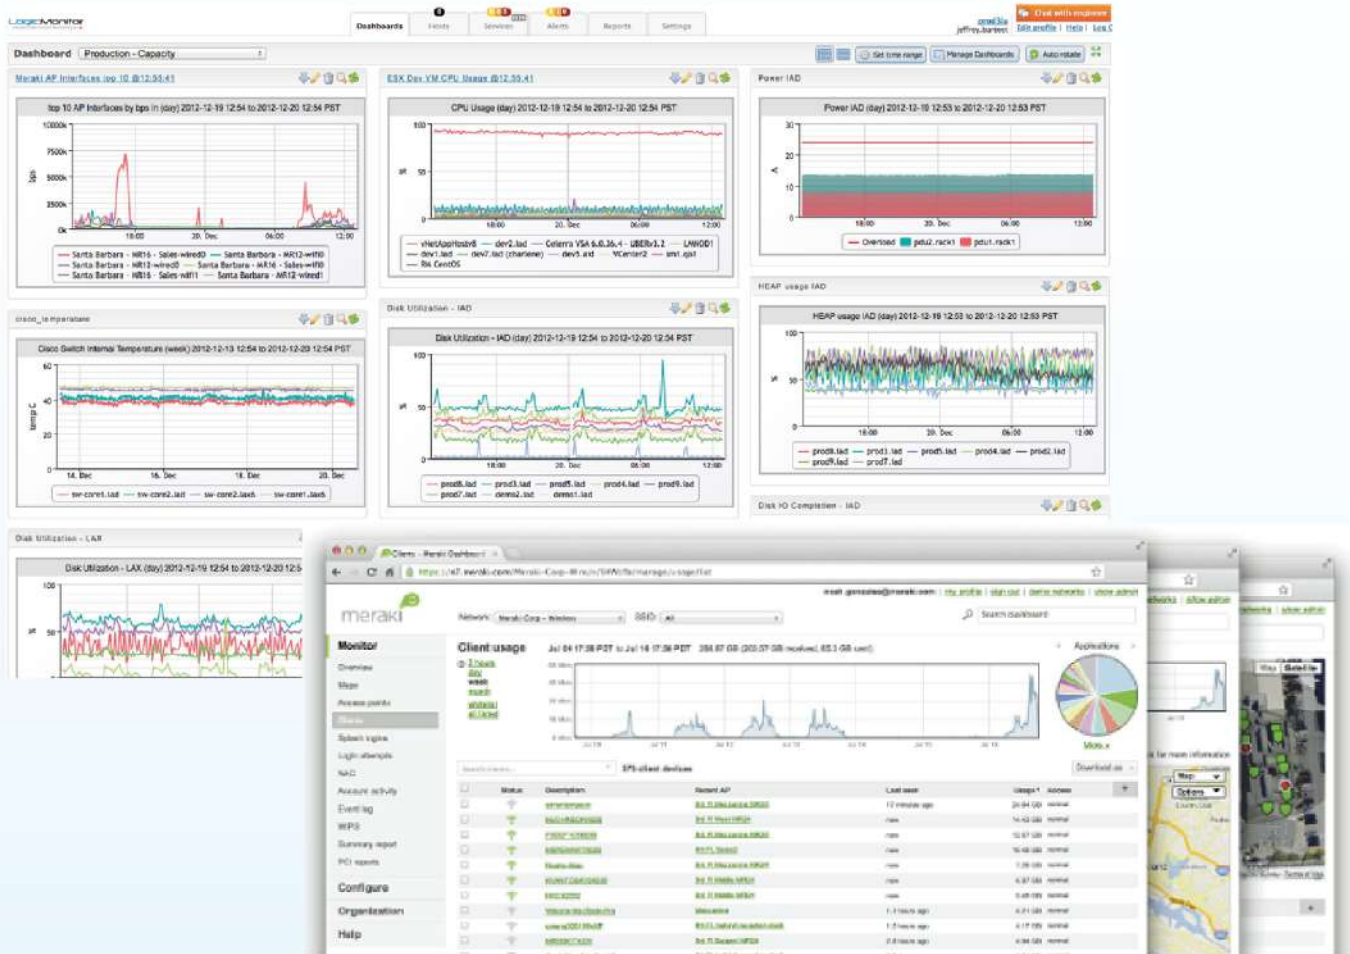

Today's business organization must face the complexity to manage network; devices needed to be configured locally and were too complex for what the branch locations needed. There is a lack of on-site IT staff called for a simple to manage centralized network with remote troubleshooting capabilities, and finally dated hardware was expensive and temporary set ups increased total cost.

To operate IT infrastructure efficiently, it need to embrace the benefits of the cloud, bringing it to the edge and branch networks and securing IT infrastructure, which can open up to new business opportunities as reduce as operational costs.

With new cloud-based solutions, Compnet can help you solve your constant challenges associated with modern, device and application-centric networks. Administrators can even manage their networks remotely with mobile application, making it easier to conduct multi-site management via the cloud. With a set of updated tools, users can finally obtain simplicity in their day-to-day operations.

Service :

100% centralized cloud management for security, networking & application control :

- Manage your entire network from a single dashboard
- Control users, applications, and devices
- Scale from small sites to enterprise deployments

Benefit :

- Turnkey installation and management
- Integrated, always up to date features
- Scales from small branches to large networks
- Reduce operational costs through ease of deployment
- Secure (PCI and HIPAA-compliant) cloud infrastructure
- Scales from small sites to million-user deployments
- Constantly up-to-date features
- Day-to-day management facilitated through intuitive browser-based Meraki dashboard

Features :

Identity-Based Firewall

Automatically assigns firewall and traffic shaping rules, VLAN tags, and bandwidth limits to enforce the right policies for each class of users.

Intrusion Prevention

Protects critical network resources from the latest security threats and vulnerabilities.

Auto VPN

Securely connects branch locations using mesh or hub-and-spoke topologies.

Content Filtering

Block undesirable web content across 70+ categories, and leverage cloud lookups to filter billions of URLs.

Anti-Malware / Anti-Phishing

Scans HTTP traffic for malware, trojans, and phishing schemes to allow users to securely surf the web.

High Availability & Failover

Provides device and connection integrity through multiple uplinks, warm spare failover, and self-healing VPN.

Application Visibility & Control

Identify which applications are being used, and then prioritize critical apps while limiting recreational apps.

Centralized Management

Seamlessly manage campus-wide WiFi deployments and distributed multi-site networks from a single pane-of-glass.
